Two state-of-the-art manufacturing plants of our collaborators

We present our latest offering: quartz engineered stone slabs.

We are pleased to announce that we have expanded our granite, quartzite and marble product offering to include stunning Quartz slabs, in collaboration with our business partners.

Quartz is one of the hardest substances which can be stylishly designed into seamless, smooth-to-the-touch bathroom vanities and kitchen countertops.

These slabs also called Engineered Stones have an exceptionally hygienic, easy-to-clean, non-porous finish which is completely joint free with 'Greenguard Gold' certification having ecologically-sensitive properties. Instead of the usual monochromes that come with ceramics and resin-based alternatives, you now have a vast choice of nature-inspired surfaces. Now you can match or coordinate our slabs and vanity sets with each other but with wall claddings and other surfaces as well.

From regular slabs to jumbo slabs to super jumbo slabs, and a whole range of prefabs which can be customized to your precise specifications. These slabs incorporate the state-of-the-art technology of Italian Breton machinery in two state-of-the-art manufacturing complexes of our business partners.

Quartz slabs are increasingly being used by world's largest homestore chains of Scandinavian origin, besides a host of other European and US high-end boutique kitchen brands.

These slabs come in a wide range from kitchen tops to counter tops to bathroom vanities- perfect for apartments, homes, large hotels, motels, cafeterias, shopping malls, offices and other residential/commercial uses.
